

SHADED SHELTER

42545545

SHADED SHELTER is a small semi-permanent housing unit built for refugees who are forced to stay away from home for a long term. SHADED SHELTER should generate the feeling of a temporary home instead of the fear of being chased after. The units are equipped with a small kitchen, a stacking bed, a water purifying device and a solar panel; the very essence of a home.

SHADED SHELTER is made from pre-fab Troldekt plates in a dimension of H2300mm x W600mm covered with local materials such as clay, loam, or even droppings. This makes an excellent isolation and very strong building shell were a simple roof can easily be fitted on. SHADED SHELTER can easily be adjusted to larger families simply by adding more panels to the outer layer. SHADED SHELTER is temporary in a way that after each monsoon the outer layer (clay or loam) needs to be repaired or replaced depending on the damage caused by severe rainfall.
